DETAILED ACTION

Allowable Subject Matter

1. Claims 2-11 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 12 rejected under 35 U.S.C. 103(a) as being unpatentable over Sonobe et al. in view of Uemura et al. (6,291,840) further in view of Murasato et al. (5,744,829) further in view of Saeki et al. (6,586,773).

Regarding Claims 1 and 12, Sonobe et al. disclose a semiconductor light emitting device having a protection device where a semiconductor light emitting device incorporates inside with a light emitting formed by semiconductor overlying layers including a first conductivity layer and a second conductivity layer in order to have a light emitting layer and a protecting element portion provided in electrical connection between the first conductivity type layer and second conductivity type layer so that light emitting layer is protected against at least reverse voltage applied to the light emitting portion. Sonobe et al. fail to disclose the required current diffusing electrode, lamination, and bonding structures. However, Uemura et al. disclose a compound semiconductor light emitting device where the required current diffusing electrode structure is

disclosed. Furthermore, Murasato et al. disclose a AlGaInP light emitting diode where the lamination structure is disclosed. Finally, Saeki et al. disclose a semiconductor light emitting device where the required bonding structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required current diffusing electrode, lamination and bonding structures in Sonobe et al. as taught by Uemura et al., Murasato et al., and Saeki et al. respectively in order to have a semiconductor light emitting device with higher performance.
